

## Research, Analysis & Strategy

---

### Research, Analysis & Strategy

In previous contracts with local authorities and infrastructure organisations, we have conducted:

- Mapping exercises,
- Face to face and teleconferencing semi-structured interviews,
- Organised focus groups,
- Developed questionnaires, feedback and monitoring & evaluation templates to capture the primary data,
- Designed needs and impact assessments,
- Data Collection,
- Progress Reports,
- Due Diligence Processing,
- Implementation Plans,
- Base Line Studies,
- Personal Developments Plans etc.

We capture our secondary data by researching social policy and market information using; web-based research, scholar articles, journals and reports.

### Analysis & Strategy

Our methods often contribute to strategy development and target identification. Due to the complexities within the third sector, local authorities and educational institutions, our roles require us to; analyse data from a vast pool of resources, present ideas clearly and accurately, make judgements, think creatively, and propose solutions based on complex situations.

As consultants, we often support the third sector on governance, strategic business planning. We provide written recommendations on the most appropriate finance options that match charities, visions, missions, values and goals.
